

	Input Queries		Output Queries
	How can I track my donation history and upcoming appointments?		You can log in to your donor account on our website to view your donation history and upcoming appointments.
	Can I donate blood if I've had a history of heart disease?		It depends on the severity of the heart disease and your overall health. Our staff will assess your eligibility.
	How long does it take for donated blood to be available for patients?		Donated blood is tested and processed quickly, typically within 24 hours, before it's made available for patients.
	Can I donate blood if I've recently had dental work?		In many cases, dental work doesn't affect blood donation eligibility.
	What's the difference between O positive and O negative blood types?		O negative is the universal donor, suitable for all blood types. O positive is compatible with Rh-positive blood types.
	Can I donate blood if I've been vaccinated for COVID-19?		In most cases, COVID-19 vaccination doesn't affect blood donation eligibility.
	What precautions are in place to prevent infection during donation?		We follow strict infection control protocols, including using sterile equipment and ensuring donor health.
	Can I donate blood if I'm currently breastfeeding?		Breastfeeding individuals are usually deferred from donating blood due to the body's increased nutritional requirements.
	Are there any age-related restrictions for platelet donation?		Platelet donors generally need to be within a certain age range, usually 18-65 years.
	Can I donate blood if I've recently had surgery?		Donation might be deferred for a period after surgery to ensure your body has fully recovered.
	Can I donate blood if I'm pregnant?		Pregnant individuals are usually deferred from donating blood due to the body's increased blood volume during pregnancy.
	What's the shelf life of donated blood?		Red blood cells can be stored for up to 42 days, while platelets have a shorter shelf life of 5-7 days.
	What's the difference between whole blood and plasma donation?		Whole blood donation includes red cells, plasma, and platelets. Plasma donation focuses on collecting plasma only.
	Can I donate blood if I've had a previous medical procedure?		It depends on the procedure and your overall health. Our staff will assess your eligibility.
	Are there specific dietary restrictions before donating blood?		Eating a balanced meal before donation is recommended, but avoid fatty foods right before donating.
	What happens to the donated blood after collection?		Donated blood undergoes testing, processing, and is stored until it's needed for transfusion.
	Can I donate blood if I've had a tattoo or piercing recently?		Depending on the location and conditions of the tattoo or piercing, there might be a temporary deferral period.
	How long does the platelet donation process take?		The platelet donation process can take around 1.5 to 2.5 hours.
	Is there a weight requirement for platelet donation?		Platelet donors usually need to meet a certain weight requirement due to the separation process.
	What should I do before donating blood to ensure a successful donation?		Stay hydrated, eat a balanced meal, and get a good night's sleep before donating.
	Do you test donated blood for infections?		Yes, donated blood undergoes rigorous testing to ensure it's safe for transfusion.
